

MAISON EN POLYSTYRÈNE

Ronan et Erwan Bouroullec

“We are working a lot with what we call micro-architecture, which is a way of dividing space and finding new ways to build inside things. It’s between a room and a bed. It’s a box you can move. It’s the idea of the flexibility of interiors; it’s more like an alphabet. It’s very important for us, this flexibility.”

Travail universitaire pour le laboratoire N360 à l'École de Design de l'UQAM

Temps d'assemblage:

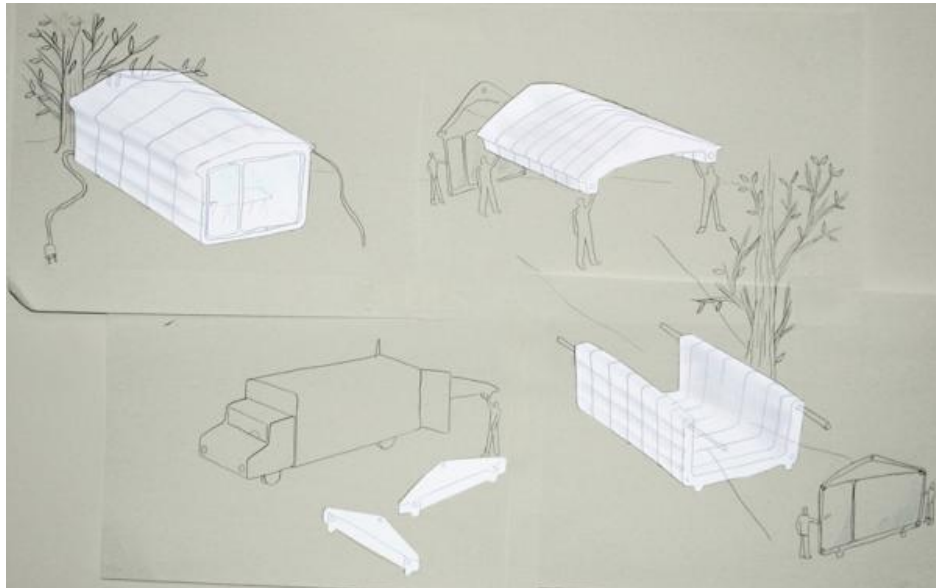

1 à 6 Heures

Nombre de personnes :

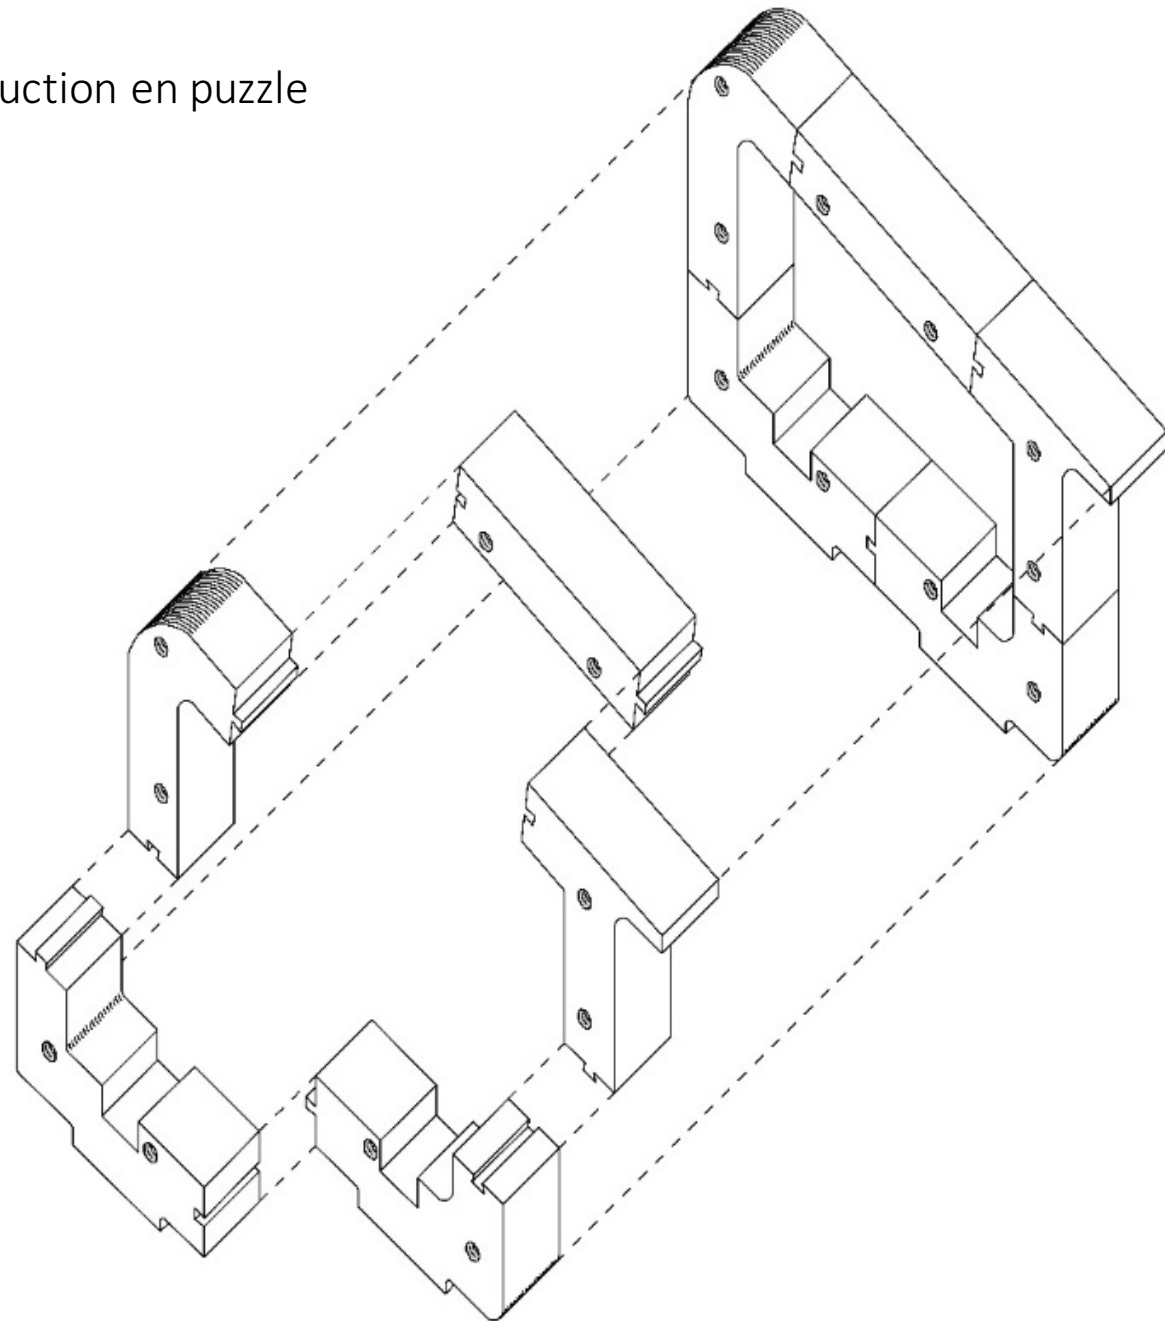

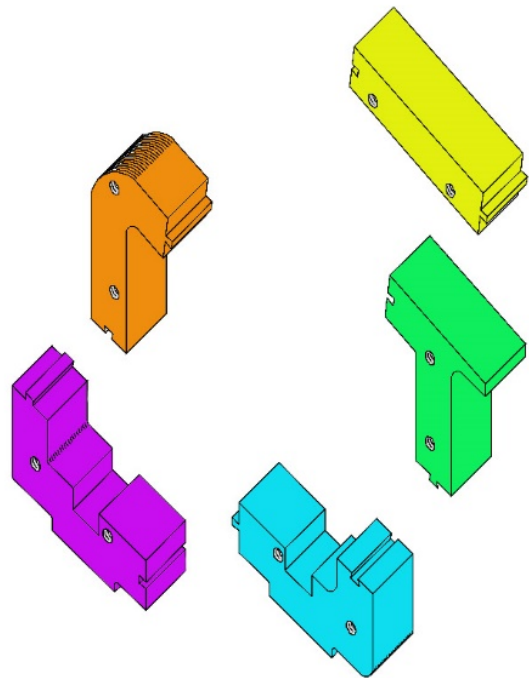

Minimum 2

Prix du bâtiment:

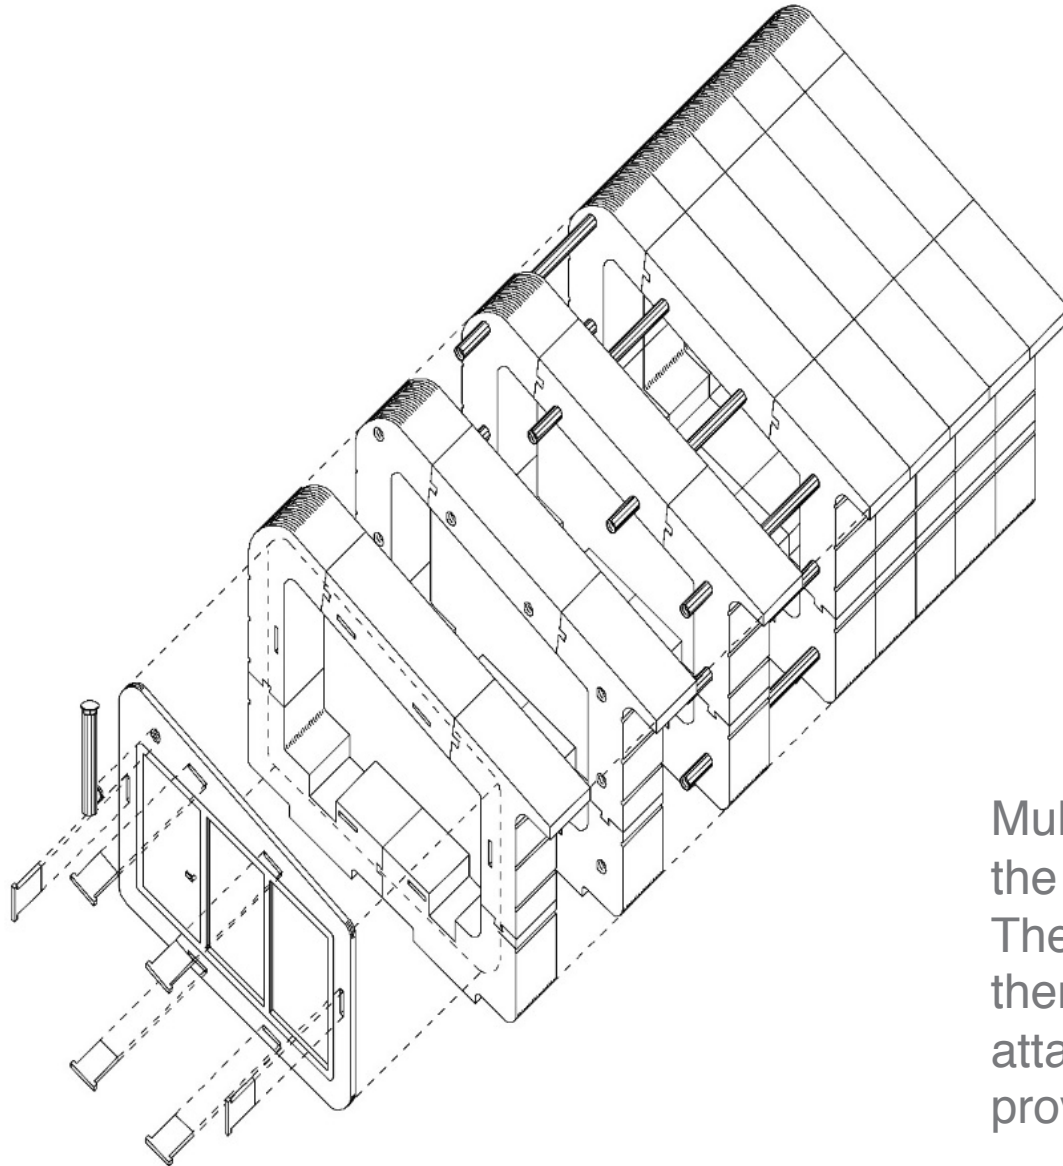

650-750\$

Construction en puzzle

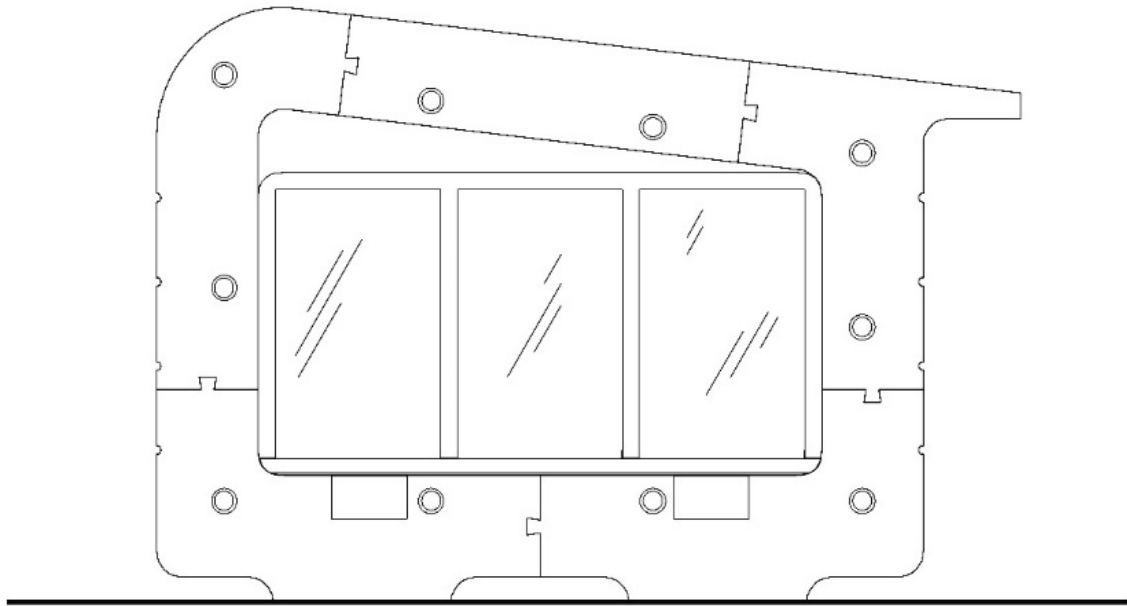

Assemblage des anneaux

Multiple rings are then combined by sliding the PVC tubes through the holes in the blocks. The plywood is added for the flooring, and then the two wood and plexiglas facades are attached. A chimney is then fixed into place to provide ventilation.

Le nombre de personne qui peuvent y dormir dépend du nombre d'Anneaux:

8 anneaux = 4 personnes

2 pieds de polystyrène enveloppe l'espace intérieur sur 4 des 6 faces
